|           | Attachment B: Principal Service Commitments and System Requirements .....  | 18 |

## SECTION ONE: REPORT OF INDEPENDENT ACCOUNTANTS

To: Management of Applied Systems, Inc.

### Scope

We have examined Applied Systems, Inc. (“Applied”) accompanying assertion titled "Assertion of Applied Systems, Inc. Management" (assertion) that the controls within Applied's IVANS System (system) were effective throughout the period April 1, 2025 to September 30, 2025, to provide reasonable assurance that Applied's service commitments and system requirements were achieved based on the trust services criteria relevant to security, availability and confidentiality (applicable trust services criteria) set forth in TSP section 100, *2017 Trust Services Criteria for Security, Availability, Processing Integrity, Confidentiality, and Privacy, (With Revised Points of Focus—2022)* in AICPA *Trust Services Criteria*.

Applied uses subservice organizations to supplement its services. The description of the boundaries of the system presented in Attachment A indicates that complementary subservice organization controls that are suitably designed and operating effectively are necessary, along with controls at Applied, to achieve Applied’s service commitments and system requirements based on the applicable trust services criteria. The description presents the types of complementary subservice organization controls assumed in the design of Applied’s controls. The description of the boundaries of the system does not disclose the actual controls at the subservice organizations. Our examination did not include the services provided by the subservice organizations, and we have not evaluated the suitability of the design or operating effectiveness of such complementary subservice organization controls.

### *Service Organization's Responsibilities*

Applied is responsible for its service commitments and system requirements and for designing, implementing, and operating effective controls within the system to provide reasonable assurance that Applied's service commitments and system requirements were achieved. Applied has also provided the accompanying assertion about the effectiveness of controls within the system. When preparing its assertion, Applied is responsible for selecting, and identifying in its assertion, the applicable trust services criteria and for having a reasonable basis for its assertion by performing an assessment of the effectiveness of the controls within the system.

### *Service Auditor's Responsibilities*

Our responsibility is to express an opinion, based on our examination, on management's assertion that controls within the system were effective throughout the period to provide reasonable assurance that the service organization's service commitments and system requirements were achieved based on the applicable trust services criteria. Our examination was

conducted in accordance with attestation standards established by the AICPA. Those standards require that we plan and perform our examination to obtain reasonable assurance about whether management's assertion is fairly stated, in all material respects. We believe that the evidence we obtained is sufficient and appropriate to provide a reasonable basis for our opinion.

We are required to be independent and to meet our other ethical responsibilities in accordance with relevant ethical requirements relating to the engagement.

Our examination included:

- Obtaining an understanding of the system and the service organization's service commitments and system requirements
- Assessing the risks that controls were not effective to achieve Applied's service commitments and system requirements based on the applicable trust services criteria
- Performing procedures to obtain evidence about whether controls within the system were effective to achieve Applied's service commitments and system requirements based on the applicable trust services criteria

Our examination also included performing such other procedures as we considered necessary in the circumstances.

#### *Inherent Limitations*

There are inherent limitations in the effectiveness of any system of internal control, including the possibility of human error and the circumvention of controls.

Because of their nature, controls may not always operate effectively to provide reasonable assurance that the service organization's service commitments and system requirements were achieved based on the applicable trust services criteria. Also, the projection to the future of any conclusions about the effectiveness of controls is subject to the risk that controls may become inadequate because of changes in conditions or that the degree of compliance with the policies or procedures may deteriorate.

#### *Opinion*

In our opinion, management's assertion that the controls within Applied's IVANS System were effective throughout the period April 1, 2025 to September 30, 2025, to provide reasonable assurance that Applied's service commitments and system requirements were achieved based on the applicable trust services criteria is fairly stated, in all material respects.

*CyberGuard Compliance, LLP*

**SECTION TWO: MANAGEMENT’S REPORT OF ITS ASSERTIONS ON THE EFFECTIVENESS OF ITS CONTROLS OVER APPLIED SYSTEMS, INC.’S IVANS SYSTEMBASED ON THE TRUST SERVICES CRITERIA FOR SECURITY, AVAILABILITY AND CONFIDENTIALITY**

November 17, 2025

**Scope**

We are responsible for designing, implementing, operating, and maintaining effective controls within Applied Systems, Inc.’s (Applied) IVANS System (system) throughout the period April 1, 2025 to September 30, 2025, to provide reasonable assurance that Applied's service commitments and system requirements were achieved based on the trust services criteria relevant to security, availability and confidentiality (applicable trust services criteria) set forth in TSP section 100, *2017 Trust Services Criteria for Security, Availability, Processing Integrity, Confidentiality, and Privacy, (With Revised Points of Focus—2022)* in AICPA *Trust Services Criteria*. Our description of the boundaries of the system is presented in Attachment A (description) and identifies the aspects of the system covered by our assertion.

We have performed an evaluation of the effectiveness of the controls within the system throughout the period April 1, 2025 to September 30, 2025, to provide reasonable assurance that Applied's service commitments and system requirements were achieved based on the applicable trust services criteria. Applied's objectives for the system in applying the applicable trust services criteria are embodied in its service commitments and system requirements relevant to the applicable trust services criteria. The principal service commitments and system requirements related to the applicable trust services criteria are presented in Attachment B.

Applied uses subservice organizations to supplement its services. The description of the boundaries of the system indicates that complementary subservice organization controls that are suitably designed and operating effectively are necessary, along with controls at Applied, to achieve Applied’s service commitments and system requirements based on the applicable trust services criteria. The description of the boundaries of the system does not disclose the actual controls at the subservice organizations.

There are inherent limitations in any system of internal control, including the possibility of human error and the circumvention of controls. Because of these inherent limitations, a service organization may achieve reasonable, but not absolute, assurance that its service commitments and system requirements are achieved.

We assert that the controls within the system were effective throughout the period April 1, 2025 to September 30, 2025, to provide reasonable assurance that Applied's service commitments and system requirements were achieved based on the applicable trust services criteria.

*Applied Systems, Inc.*

## ATTACHMENT A: APPLIED SYSTEMS, INC.'S DESCRIPTION OF THE BOUNDARIES OF ITS IVANS SYSTEM

### *Company Background*

Since 1983, Applied Systems, Inc. ("Applied") has led an industry Applied helped to create with a mission to continuously improve the business of insurance. Insurance agencies and brokerages have faced new challenges and demands on their businesses over time, and Applied has been there to guide them. Applied has been at the forefront of insurance technology, leading the way through innovation. As the insurance industry becomes increasingly global, Applied is delivering new technology and expanded multinational capabilities for this changing marketplace.

Headquartered in Chicago, Illinois, Applied serves over 339,000 users worldwide. Applied is a leading provider of hosted software solutions, providing applications for agencies, brokers, and insurers. These software solutions are available from a combination of Applied public, private and third-party cloud services through Applied Cloud Services ("Applied Cloud") product offerings, depending on the needs of Applied's customers. The IVANS System and its related controls, including system redundancy, are key differentiators in providing and maintaining high availability, 24/7 access for customers. The scope of this report covers the services which house data within Applied's colocation environments and third-party cloud services located within the United States, Canada, and the United Kingdom.

Additional data center differentiators include:

- **High Availability Platform**
  - Purpose-built data centers classified as Tier 3+ as defined by the Uptime Institute;
  - Multiple Internet connections to provide redundant Internet access for Applied's clients business;
  - Excess capacity within each data center to act as the disaster recovery destination for an opposing site;
  - High availability and redundancy within each site, including uninterruptable power supply and climate control;
  - Redundant firewalls and networking infrastructure; and
  - Resource pool of servers operating in a highly available cluster to allow immediate recovery for any localized failure.
- **Data Protection and Integrity**
  - All backups preformed to disk targets then replicated to the data centers, so that tapes are not lost, misplaced, or damaged while in transit; and
  - 24/7/365 operation, with constant monitoring and performance of first level problem resolution against the Applied Cloud.

- **Advanced Security**

- All databases stored in the Applied Cloud leverage AES-256 data-at-rest-encryption (DARE) which is FIPS 140-2 certified;
- Network, application, and asset monitoring and testing protect data classified as personal information (also referred to as personally identifiable information or personal data);
- Internet traffic protected by a minimum of 256-bit, bi-directional, packet-level encryption; and
- Advanced building design protects the data center floor from exterior penetration, maintains complex video surveillance, strict access control policies and utilizes mantraps, biometric systems and on-site security guards.

Use of Applied software deployed within the Applied Cloud provides clients' business with flexibility, security, and business continuity to drive business growth and profitability. By hosting the Applied solutions in the Applied Cloud, Applied's clients gain best in class technology to support online product needs. Applied is committed to continually investing in the Applied Cloud to support business growth.

### **IVANS System Overview**

Applied provides various market leading software applications designed to enhance Applied's core product capabilities, including IVANS, and other products to Applied's customers from the Applied Cloud. The IVANS System is hosted in the Applied Cloud and provided through a Software-as-a-Service (SaaS) model, with customers purchasing software access rights for the number of users required.

## **System Overview**

The system is comprised of the following components:

- **Infrastructure:** The physical and hardware components of a system (facilities, equipment, and networks);
- **Software:** The programs and operating software of a system (systems, applications, and utilities);
- **Data:** The information used and supported by a system (transaction streams, files, databases, and tables);
- **People:** The personnel involved in the operation and use of a system (developers, operators, users, and managers); and
- **Procedures:** The automated and manual procedures involved in the operation of a system.

### **Infrastructure**

For each Applied Cloud environment built in Applied's data centers, Applied consistently use like technologies utilizing manufacturers including Cisco, Pure Storage, Dell, F5 Networks,

VMware, Microsoft, and others. Applied owns and maintains all operating equipment within the contracted (colocation) space of the data center. At a minimum, all sites contain the following infrastructure:

- Redundant power feeds from separate UPS systems to each rack;
- Multiple Internet providers using BGP and diverse paths for redundancy in Internet connectivity;
- Redundant network infrastructure including firewalls, IDS/IPS, Domain & Geolocation shunning, DDoS protection, load balancers, switches, VPN devices and routers;
- 10 GB network connectivity support for all core devices;
- Fully virtualized server platform with servers in resource clusters based on load type;
- Physical hosts redundantly connected to SAN, network, and power components
- Virtual network segmentation for products and server purpose; and
- Remote control technologies including managed PDU's, secure console devices and remote server out-of-band management.

### **Production Environment**

Applied utilizes Google Cloud Platform (GCP) and Amazon Web Services (AWS) to provide infrastructure management services. Services operate within a shared security responsibility model, where GCP and AWS are responsible for the security of the underlying cloud infrastructure, and Applied is responsible for the systems deployed in GCP and AWS.

Applied uses many technologies and protocol in order to better secure Applied's infrastructure. Production instances at GCP and AWS are logically and physically separated from Applied Systems, Inc.'s internal corporate network. Orca software is leveraged to test for vulnerabilities and offers context, prioritization, and remediation for the identified vulnerabilities. Orca delivers industry-leading Cloud Security that identifies, prioritizes, and remediates security risks and compliance issues across Applied's GCP and AWS infrastructure.

At Applied, Cloudflare is leveraged for the Web Application Firewall. This focuses on evaluating incoming application requests for known vulnerabilities based on a set of rules. GCP and AWS' VCP Firewalls are utilized to control network traffic.

We also use the following tools in addition to those identified above:

- Kubernetes- Automated deployment, scaling, and container management
- Envoy- Network traffic management
- Apigee- API management solution
- Terraform- IaC platform, RBAC within cloud environment
- Cloudflare- Web Application Firewall (WAF), DDos Mitigation, Content Delivery Network (CDN) Services, and DNS Services

## **Applied Data Centers**

Applied deploys the IVANS System through the Applied Cloud, which operates from within purpose-built colocation data centers geographically distributed to support its global customer base. Facilities are selected using a risk assessment process to identify locations that have a low risk of natural disaster from earthquake, flood, fire, windstorm or other severe weather conditions. Site selection also includes consideration for local civil disruptions, power capacity and stability, proximity to other high risks such as railways, airports, and selective manufacturing environments. Each data center has a SOC or country equivalent assessment conducted annually.

Each colocation facility is sited at, and managed by, a subservice organization with skilled and experienced employees to provide core facility components to Applied. These include physical security and access controls; power systems including utility power, N+1 generator power, redundant UPS systems, redundant power distribution and switching components, and redundant circuits delivered to each rack; redundant heating, ventilation, and air conditioning (HVAC) systems; dry pipe and multi-zone fire detection devices with early smoke detection capabilities; video surveillance with 24-hour monitoring; and diverse telecommunications paths into the facility.

Specific features provided by the data centers include:

- **Highly Secure Environment**
  - Multiple layers of hardened physical security;
  - 24x7x365 on-site security presence;
  - Closed-circuit television surveillance with digital storage;
  - Multiple layers of electronically controlled card access;
  - Keyed access to physical Applied space;
  - Electronic key card readers; and
  - Facility verification of government issued photo IDs against approved access list.
- **Power Distribution**
  - Commercial grade high-capacity UPS system with complete isolation for redundancy;
  - Multiple 1,500+ KW generators for backup power with N+1 redundancy;
  - Minimum of five days of on-site fuel supply and extended refuel contracts;
  - Each circuit breaker backed by diverse power distribution units and diverse UPS infrastructures for the ultimate in uptime;
  - Isolated redundant UPS configuration providing industry's highest MTBF; and
  - Individual circuit load monitoring to ensure the best power management.
- **Environmental Control**
  - Temperature above floor maintained between 64 and 78 degrees; humidity maintained between 40 and 60 percent;
  - Redundant HVAC with minimum of 30 percent reserved capacity installed;
  - Sufficient air handling units for N+1 redundancy; and

- Multiple glycol cooling units for N+1 redundancy.
- **Fire Detection/Prevention**
  - Zoned dry-piped, pre-action sprinkler system; and
  - Zoned VESDA (Very Early Warning Smoke Detection) system throughout the data center.
- **Private/Point-to-point network connectivity**
  - Applied provides connectivity options for VPN solutions between Applied data center and some clients' facilities, as required; and
  - Applied supports the use of MPLS connectivity into the Applied Cloud environment for customers who prefer to use network connectivity with carrier provided service level agreements.
- **Connectivity (Availability and selection of carriers varies by location)**
  - Diverse entry paths into each facility;
    - Lumen;
    - Comcast;
    - Bell CA;
    - Zayo;
    - 365 Data Centers;
    - Equinix;
    - eStructure Data Centers;
    - Aptum;
    - Megaport

### **Software**

Applied leverages Microsoft® technologies for nearly all its virtual machine operating systems. Authentication services are provided through Microsoft Active Directory, database services are provided through Microsoft SQL Server, and web services mostly provided through Microsoft IIS. Other operating systems may be found on specialty devices, custom hosting environments built to customer specifications, and limited infrastructure management toolsets.

Application products in this scope developed by Applied and operating from the data center include:

- **Insurer Interface**
  - IVANS Bookroll - Ivans Bookroll™ eliminates the tedious exchanges between agencies and carriers by streamlining the process of matching, packing and securely delivering book roll information to carriers, saving time and preventing rekeying errors.
  - IVANS Download - Ivans Download™ automates the exchange of claims and policy information between the client and the clients carrier and MGA partners so the latest details are instantly available.

- IVANS eServicing - Ivans eServicing™ allows clients to ping their carrier partners' systems to get all of the account status, billing, claims, policy and loss run information clients need. In addition, clients stay in the management system the entire time.
- IVANS Exchange – A way to view and manage client carrier and MGA download connections; Ivans Exchange™ is a complimentary online tool that lets clients track current and new download connections. Its user-friendly design allows clients to track total download usage, available opportunities to increase connectivity, and indicate to carriers the clients interest in new lines of download or quality issues.
- **Carrier and MGA Interfaces**
  - IVANS Distribution Platform - A way to simplify sales and distribution; Ivans Distribution Platform™ is a solution that makes accessing agency distribution channel easier, so clients can market, quote and bind more of the right Commercial Lines business. Plug into the largest network of retail agencies and technology partners to grow in-appetite submissions and expand into new distribution channels. By removing complexity from sales and distribution, Ivans Distribution Platform makes business more profitable for both clients and client retail agency partners.
  - IVANS Insights - A quick and easy way to understand the business written by independent insurance agencies; Ivans Marketing Insights™ empowers insurance carriers to quickly and confidently understand their share and coverage of the business agencies are writing in the market. With easier access to comprehensive intelligence on independent agency business, insurance carriers can more precisely grow agency share of wallet, understand growth opportunities relative to other carriers, and identify new products based on market demand.

### **Data**

Applied acts as the data processor for agency, broker and carrier information stored or transmitted through the IVANS System deployed within the Applied Cloud. Specifics include:

- Customer data stored within the Applied Cloud environment is classified as CONFIDENTIAL to all Applied staff;
- Applied stores data in one of the aforementioned data centers, which is backed-up daily and replicated to its paired site for disaster recovery;
- In addition to stored/hosted data being encrypted at rest, Applied uses secure communications channels for data transmitted through the application or Web services between the end-user and the data center; and
- Applied destroys data from storage in the Applied Cloud no later than 180 days after the cancellation of a contract, and data expires from backup media in accordance with its backup retention policy.

## People

The competence of employees is a key element of the system. Applied is committed to the development of its employees and the recruitment of qualified professionals to support the growth of Applied's business.

A dedicated team of technology professionals are responsible for the design, deployment, management, administration, and monitoring of the Applied Cloud and in turn the software solutions deployed via the Applied Cloud. The Cloud Services team consists of staff specializing in the storage, server, network, application, virtualization, security, monitoring, and SQL technologies. This includes but is not limited to engineers, application administrators, a 24x7x365 operations team, and DevOps resources. All teams report up through the Senior Vice President of Cloud Services.

It is the responsibility of these team members to maintain the data center and the related software applications in a working state for the Applied Cloud customer base. This includes managing resources against capacity requirements, provisioning new orders, monitoring for system and application health, performing routine application updates and patch management at the OS and application layers, and monitoring for and assisting with the remediation of security threats. The Senior Vice President of Cloud Services works closely with Applied's Chief Information Security Officer (CISO) and the Information Security team to meet such requirements.

Key positions are as follows:

**Chief Customer Officer (CCO)** is responsible for Applied's customer delivery strategy and operational execution for Applied's Professional Services, Support and Cloud-based solutions.

**Chief Technical Officer (CTO)** directs the technology, architecture, and application development of Applied's products.

**Chief Information Officer & Chief Information Security Officer (CISO)** heads the Office of Information Security for Applied and related Corporate IT services. Leads all information security related initiatives, including management of the information security program, which includes formalizing a cyber-risk management strategy, continuous governance and compliance exercises, as well as vulnerability management practices and incident response procedures.

**Senior Vice President of Cloud Services**, heads global IT operations for Applied's Cloud hosting services and oversees the operations of Applied's four global data centers.

**Vice President of Product Operations** is responsible for developing the product roadmap for Applied Cloud administration and management applications, and consulting with the

Applied application development teams to represent the unique requirements that come with hosting and updating Applied applications in the data center.

**Director of Internal Application Development** directs the technology, architecture, and application development of internal and data center information systems and integrations.

**Director of Data Center Engineering** leads the team responsible for the architecture, deployment, and support of technology within the Applied Cloud data centers.

**Leadership Committee** operates independently and provides oversight on the system of internal control.

### **Procedures**

Applied provides multiple technology platform services to its customers through a subscription of services. These include agency and brokerage management systems, carrier interface, reporting services, and consumer-focused products.

Applied has a series of procedures to provision new subscriptions for services provided by the Applied Cloud, including the IVANS System. These steps include:

- Setup new client entities based on applicable signed contracts;
- Modify backup and monitoring policies to include new resources;
- Verify product access is customer ready; and
- Setup initial authorized application administration account and provide information to customer in a secure manner.

Once new system subscriptions are created and administrative users for the client account have been established within the system, the following activities occur to ensure that services are available for client use:

- Resources actively monitored for available and capacity management;
- System performance metrics reviewed;
- Backup and restore procedures performed;
- Application updates managed;
- Customer communications distributed to advise of maintenance schedules, product updates, and other relevant information;
- Ongoing security management, assessments, and remediation; and
- Termination of access when customer cancels service, including the removal of data in accordance with the defined policy after a designated holding period.

## Complementary Subservice Organization Controls

Certain principal service commitments and system requirements can be met only if complementary subservice organization controls (CSOC) assumed in the design of Applied’s controls are suitably designed and operating effectively at the subservice organizations, along with related controls at Applied.

### Equinix

Applied uses Equinix as the co-location data center for the Applied Cloud environment. The following Complementary Subservice Organization Controls (CSOCs) are expected to be operating effectively at Equinix, alone or in combination with the controls at Applied, to provide assurance that the required trust services criteria in this report are met.

| Applicable Trust Services Criteria | Complementary Subservice Organization Controls  |
|------------------------------------|---|
| 6.4                                | Equinix is responsible for restricting physical access to facilities and protected information assets to authorized personnel.              |
| 6.7                                | Equinix is responsible for implementing security measures to protect information against threats during transmission, movement, or removal. |
| A 1.2                              | Equinix is responsible for maintaining and monitoring environmental protections and recovery infrastructure.                                |

### 365 Data Centers

Applied uses 365 Data Centers as the co-location data center for the Applied Cloud environment. The following Complementary Subservice Organization Controls (CSOCs) are expected to be operating effectively at 365 Data Centers, alone or in combination with the controls at Applied, to provide assurance that the required trust services criteria in this report are met.

| Applicable Trust Services Criteria | Complementary Subservice Organization Controls   |
|------------------------------------|--|
| 6.4                                | 365 Data Centers is responsible for restricting physical access to facilities and protected information assets to authorized personnel.              |
| 6.7                                | 365 Data Centers is responsible for implementing security measures to protect information against threats during transmission, movement, or removal. |

| Applicable Trust Services Criteria | Complementary Subservice Organization Controls  |
|------------------------------------|---|
| A 1.2                              | 365 Data Centers is responsible for maintaining and monitoring environmental protections and recovery infrastructure. |

**Aptum**

Applied uses Aptum as the co-location data center for the Applied cloud environment. The following Complementary Subservice Organization Controls (CSOCs) are expected to be operating effectively at Aptum, alone or in combination with the controls at Applied, to provide assurance that the required trust services criteria in this report are met.

| Applicable Trust Services Criteria | Complementary Subservice Organization Controls  |
|------------------------------------|---|
| 6.4                                | Aptum is responsible for restricting physical access to facilities and protected information assets to authorized personnel.              |
| 6.7                                | Aptum is responsible for implementing security measures to protect information against threats during transmission, movement, or removal. |
| A 1.2                              | Aptum is responsible for maintaining and monitoring environmental protections and recovery infrastructure.                                |

**eStruxture**

Applied uses eStruxture as the co-location data center for the Applied cloud environment. The following Complementary Subservice Organization Controls (CSOCs) are expected to be operating effectively at eStruxture, alone or in combination with the controls at Applied, to provide assurance that the required trust services criteria in this report are met.

| Applicable Trust Services Criteria | Complementary Subservice Organization Controls   |
|------------------------------------|--|
| 6.4                                | eStruxture is responsible for restricting physical access to facilities and protected information assets to authorized personnel.              |
| 6.7                                | eStruxture is responsible for implementing security measures to protect information against threats during transmission, movement, or removal. |

| Applicable Trust Services Criteria | Complementary Subservice Organization Controls  |
|------------------------------------|---|
| A 1.2                              | eStructure is responsible for maintaining and monitoring environmental protections and recovery infrastructure. |

**Google Cloud Platform (GCP)**

Applied uses GCP provide infrastructure management services for the Applied Cloud environment. The following Complementary Subservice Organization Controls (CSOCs) are expected to be operating effectively at GCP, alone or in combination with the controls at Applied, to provide assurance that the required trust services criteria in this report are met.

| Applicable Trust Services Criteria | Complementary Subservice Organization Controls   |
|------------------------------------|--|
| 6.4                                | GCP is responsible for restricting physical access to facilities and protected information assets to authorized personnel. |
| A 1.2                              | GCP is responsible for maintaining and monitoring environmental protections and recovery infrastructure.                   |

**Amazon Web Services (AWS)**

Applied uses AWS provide infrastructure management services for the Applied Cloud environment. The following Complementary Subservice Organization Controls (CSOCs) are expected to be operating effectively at AWS, alone or in combination with the controls at Applied, to provide assurance that the required trust services criteria in this report are met.

| Applicable Trust Services Criteria | Complementary Subservice Organization Controls   |
|------------------------------------|--|
| 6.4                                | AWS is responsible for restricting physical access to facilities and protected information assets to authorized personnel. |
| A 1.2                              | AWS is responsible for maintaining and monitoring environmental protections and recovery infrastructure.                   |

## User Entity Responsibilities

---

### User Entity Responsibilities

Applied’s controls are designed to provide reasonable assurance that the principal service commitments and system requirements can be achieved without the implementation of complementary controls at user entities. As a result, complementary user entity controls are not required, or significant, to achieve the principal service commitments and system requirements based on the applicable trust services criteria.

However, in order for user entities to benefit from Applied’s system and its controls, the following responsibilities should be considered by user entities:

| # | User Entity Responsibilities   | Related Applicable Trust Services Criteria |
|---|--|--|
| 1 | Users are responsible for restricting authority of provisioning new user accounts within any Applied Software-as-a-Service model application.  | 6.2  |
| 2 | Users are responsible for disabling access in a timely manner to ensure the terminated employee account access is removed.   | 6.2  |
| 3 | Users are responsible for ensuring user owned or managed applications, platforms, databases, and network devices that may process or store data derived from Applied are logically secured. Users are also responsible for Internet access to the Applied Cloud environment. | 6.1  |
| 4 | Users are responsible for ensuring user access to reports and other information transmitted to, or generated from, Applied is restricted based on business need.   | 6.4, 6.7                                   |
| 5 | Users of Applied hosted applications are responsible for maintaining appropriate IT General Computer Controls and Application Controls.  | 6.2, 6.3                                   |
| 6 | Users of Applied hosted applications are responsible for maintaining appropriate password management controls including complexity, periodic change, and minimum length.   | 6.1, 6.3                                   |

| # | User Entity Responsibilities   | Related Applicable Trust Services Criteria |
|---|--|--|
| 7 | Users are responsible for adhering to all regulatory compliance issues when they are associated with Applied in a service agreement. | 2.3, C1.1                                  |
| 8 | Users are responsible for reviewing and approving the terms and conditions stated in service agreements with Applied.                | 2.3, 7.2                                   |

## **ATTACHMENT B: PRINCIPAL SERVICE COMMITMENTS AND SYSTEM REQUIREMENTS**

### ***Description of Services Provided***

Applied's leading global cloud software automates the exchange of information and data throughout the insurance lifecycle among agents, brokers, insurers, and consumers throughout the United States, Canada, the Republic of Ireland, and the United Kingdom. By enabling greater access to information and streamlining workflows, Applied's customers can capitalize on new opportunities, increase the efficiency and profitability of their business, and continuously deliver the high-level service that customers expect.

The IVANS portfolio consists of some of the following components:

#### **Insurer Interface**

- IVANS Bookroll – Automated book transfer
- IVANS Download – Digital Access to Insured Data
- IVANS eServicing – On-demand client policy inquiry
- IVANS Exchange – Ivans client portal

#### **Carrier and MGA Interfaces**

- IVANS Distribution Platform – Digital quoting and submissions
- IVANS Insights – Agency insight tools

### ***Principal Service Commitments and System Requirements***

Applied describes the products, services, and scope of work provided to its clients through software and services agreements, orders, and Applied's public website. Obligations, responsibilities, and deliverables are documented and agreed upon by both parties in the Applied Master Agreement and related paperwork, and contracts must be established before software or services are provided. Applied designs its software solutions to meet contractual commitments and periodically reviews contracts to verify that the commitments therein reflect the ongoing updates to the software and services Applied provides.

Security, availability, and confidentiality commitments are documented and communicated to customers within these agreements, which include, but are not limited to, the following:

- Maintain appropriate administrative, physical, and technical safeguards to protect the security and integrity of the Applied Cloud and customer data therein in accordance with Applied's security requirement;
- Reporting on Controls at a Service Organization Relevant to Security, Availability, and Confidentiality (SOC 2) examinations;

- Use formal employee management processes, including background checks, code of conduct and company policy acknowledgements, security awareness training, disciplinary processes, and annual performance reviews;
- Use of encryption technologies to protect customer data both at rest and in transit over untrusted networks;
- Use of firewalls, IP shunning devices, and network segmentation to restrict data flow.
- Infrastructure security monitoring including intrusion detection & prevention systems, centralized log management and alerting;
- Prevent malware from being introduced to production systems;
- Vulnerability management program designed to identify and correct vulnerabilities within the Applied Cloud in a timely manner;
- Incident Response program designed to minimize and remediate the impact of cyberattacks and protect resources; and
- Geographically separated data centers with multi-layered physical security controls.
- Maintain a disaster recovery and business continuity plan to ensure availability of information following an interruption or failure of critical business processes.
- Maintain confidentiality of customer data and notify customers in the event of a data breach.
- Identify, classify, and properly dispose of confidential data when retention period is reached and/or upon notification of customer account cancellation.

Applied establishes system and operational requirements that support the achievement of the principal service commitments, compliance with applicable laws and regulations, and other system requirements. These requirements are communicated in Applied's policies and procedures, system design documentation, and/or in customer contracts. Information Security policies define how systems and data are protected. These policies are updated as appropriate based on evolving technologies, changes to the security threat landscape, and changes to industry standards, provided that any updates do not materially reduce the service commitments or overall service provided to customers as described in the customer contracts.

Applied regularly reviews the security, availability, confidentiality, and performance metrics to ensure these commitments are met.
